About us
Program Planning Professionals Ltd (Pcubed – www.pcubed.com) is the largest global management consulting firm uniquely focused on program, portfolio and change management. We have delivered business transformation and embedded innovation for half of the Fortune 100 since 1994.

Deployment Project Engineer (M/W) – Security

Your next Challenge
At MI-GSO | PCUBED, our mission is to deliver our clients’ most important projects and programmes. We take pride in delivering world-class project, programme and portfolio management services to clients in every industry. We are specialists in helping businesses to react faster, hit their targets and succeed. In the 25 years that we’ve been in business, we’ve helped some of the world’s largest companies achieve their most complex goals.

As a Deployment Project Engineer, you will be based in Singapore.

During all the stages of the deployment phase of our projects, the Deployment project engineer:
- Performs system and/or devices integration testing, analyse, troubleshooting and draw conclusions to the project team.
- Coordinates the technical deployment task that include hardware, server/workflow installation and workstation.
- Writes procedures, user documentation, operation manual, test procedures and test reports.
- Manages vendors involved on the different projects.
- Tracks of hardware and software delivery. Updates system hardware and software configuration files.
- Provides support during system trial, ORAT and Go Live.
- Realizes software customization and integration test if required.

Our clients are as diverse as they are influential so working in our company means making an impact on some of the largest and most interesting companies in the world.

Being exposed to this range of clients means you’ll build up a resume of experience across industries. Making you competitive in any field.

So, join us and take yourself and your career to the next level. Enhance yourself, acquire new skills, become an expert, create and lead.
Who are you?

We're looking for a Deployment Project Engineer an experience in development, customization and integration. Previous activities would be an added advantage. We need someone who can analyze and evaluate complex problems, identify relevant issues and recommend corrective measures.

We're looking for someone who:
- Has a degree in Mechanical, Electrical or Electronic engineering, or IT from a recognized institution
- Has excellent oral and written communications skills, including presentation and facilitation skills
- Has minimum 3 years of working experience, with minimum 1 year in system implementation and technical support; plus, also minimum 1 year of experience on multi-platform installation such as Linux and Windows servers
- Fresh graduates are welcomed to apply

Fluent in English, another language a plus, the candidate has good interpersonal skills, with effective communication and he can interact with diverse group: clients, vendors, internal teams.

Autonomous, organized and positive with a high level of self-motivation, he is able to mentor or instruct co-workers to achieve his goals.

Solution finder, he has an appropriate sense of urgency in fulfilling customer requirements. He has the ability to determine cause of problem on hardware, operating system, software application programs or network failures.

So, if it sounds like we're describing you, we want to meet you.
