**Business Analyst Consultant**

**Responsibilities:**

We are looking for suitable candidates whose role is to design and implement information systems geared toward optimizing revenue for an organization. He/she combines a variety of strategies such as information engineering, modeling, and cost based accounting in creating systems that give satisfaction to both the organization and the customers.

The business analyst is responsible to execute both technical and analytical functions to ensure smooth flow of business in the organization. He/she will be involved from the conception of the business development strategy, and creates a detailed system design, making available good programming throughout the business development process.

The business analyst also partake in the maintenance of the ERP system, and assist customers and other experts on the team in resolving issues related to software application support.

Those who aspire to excel as business analyst consultants should apply.

**Requirements:**

- Fresh Graduates/IT Professionals in Information Technology or related discipline
- Create designs for technical solutions to resolve business problems and try-out components of new systems for efficiency.
- Reach out to customers and project leaders in the course of work in order to identify and evaluate user and business requirements.
- Create and facilitate efficient and cost effective solutions and analyse systems specification to meet business requirements.
• Supervise all integration processes with new customers and other third-party vendors.

• Ensure clean and accurate documentation that may include aspects such as business requirements, customer requirements, and technical specifications, and write findings in form of reports, which may be used in professional publications.

• Ensure that all documents are safely kept and accessible for future reference, and carryout routine testing of software patches; assist with new releases, and approve all User Acceptance Testing.

• Facilitate professional and constant communication with overall users on the status of production problems that might arise and inform them about ways of resolving issues.

• Supervise project development processes with customers and vendors for the successful execution of projects.

• Monitor queue to ensure that all necessary orders are checked and released on time.

• Carryout research on how IT systems are used and suggest ways for systems improvement and efficiency.

• Those who aspire to be retrained as business analyst consultants should apply.

• Good interpersonal and communication skills
