ABOUT mthree

mthree is an emerging talent partner to global, blue-chip enterprises focusing on their technology and business operations. We work with clients for the long-term, taking the time upfront to understand their business and workforce requirements to ensure business outcomes are achieved.

We source, train and hire diverse outstanding people with the skills that are most in demand and embed them seamlessly into our clients’ teams for 24 months, at which point they can be converted to full time employees. Alternatively, we can reskill a client’s own employees.

Core Services

- Alumni Graduate Programme
- Alumni Pro Programme
- Consulting and Advisory
- Managed Services

We have a global presence and are experts in delivering exceptional quality to our client base, providing consulting services across Risk, Regulation & Compliance; Vendor Products; Application Support; Application Development; Cyber & Information Security; Data Science and DevOps areas.

Our Alumni Pro programme is designed for people who have either typically completed the Alumni scheme or professionals who want to accelerate their career by moving sector or changing role within financial services.

JOB DESCRIPTION

Alumni PRO level KDB+ Developer is required to join our Investment Banking client’s Fixed Income Currencies and Commodities technology team, which has a proven track record of delivering critical low-latency front-office pricing / trading solutions to the FICC businesses. The candidate will be working in the FICC KDB technology team, helping to build and maintain high availability, globally deployed systems.

The current team structure is global, spread over London, Singapore and the US. As a group, we communicate at all levels within the organization.

A long list of new features needs to be developed for the FICC business. Strong software engineering skills are required as this role is not restricted to understanding the technology, but also the business requirements and architectural vision of the platforms. Knowledge of any of the following business areas encompassing FX, Rates and Credit is desired. The candidate will be experienced in working with an agile delivery model and be good at communicating with other developers both in EMEA and the US as part of a global team.

Key Responsibilities

- This is a great opportunity to work in business focused solutions-based development team. It is expected that the candidate plays an active role in developing the KDB based data platform, maintain existing KDB based FIDD Data platform and be able to articulate effectively with all stakeholders.
- The candidate will be a skilled developer capable of taking existing production
architecture and ambiguous/changing requirements into stride.

- The candidate will then come up with cohesive, intelligent and logical solutions to problems, which not only meet the immediate requirements of the global business, but also provide an avenue for further extension.
- Development is primarily KDB based, with peripheral technologies including python, UNIX shell scripting, and Hadoop and related technologies. The candidate’s repertoire should include knowledge of client-server/distributed technologies.
- The candidate will be working in the FICC horizontal technology team, helping to analyze, design, build and deploy multi-tier, high availability systems globally deployed systems.
- The candidate will be experienced in working with an agile delivery model and communicating with other developers both in EMEA and the US as part of a global team.

Key Requirements

- Grad (4 year)/Post grad in Computer Science (or relevant work experience in large scale IT environment)
- At least 2-4 years of experience in development
- Solid knowledge of the UNIX / Linux environment
- Strong experience in one or more scripting languages (Perl, Python, Unix Shell Scripting)
- Experience in designing and developing ETL processes for the project's data warehouse
- Demonstrated ability to learn and apply critical thinking to a variety of situations
- Experience in Python is preferred
- Experience in FICC business & large Financial Institution is preferred

Technical Skills:

- Solid knowledge of the UNIX/Linux environment
- Strong scripting skills (e.g., Python, Perl, Shell script)
- Knowledge of Java a plus

Soft Skills:

- Effective written and oral communication skills
- Ability to multi-task and handle multiple projects
- Ability to work in a fast paced, challenging environment
